Radon Measurement Report

RADON LEVEL BELOW 4.0 pCi/L - PASS

The test results on this property were **NOT** found to be elevated during the testing period and below the EPA action level of 4.0 pCi/L.

If the result of an initial short-term measurement is below 4pCi/L a follow-up test is not necessary. However, since radon levels can change over time, you may want to test again sometime in the future (2 years), especially if use patterns change and a lower level of the building becomes occupied or used more often. Renovations, changes in ventilation, earthquakes, settling of the ground beneath the building, and other changes may cause indoor radon exposures to change. If the radon levels are between 2.0 pCi/L and 4.0 pCi/L the EPA recommends you consider mitigation, periodic retest, or long term testing as indoor Radon levels vary by season and weather conditions.
